

Under Trump, Americans Breathed The Cleanest Air In U.S. History, And Other Environmental Wins The Biden Administration Deleted

During his first two days “unifying” the nation, President Joseph R. Biden delivered for the most radical environmental interests of the Democrat coalition that nominated and elected him. After all, that is what he promised to do. Killing the Keystone Pipeline and rejoining the Paris Climate Agreement is just the start of his “unifying” environmental agenda.

The Council on Environmental Quality (CEQ), which is part of the Executive Office of the President, has produced “The Trump Administration’s Environmental Accomplishments.” Here are a few of the highlights you might not know about, especially since the Biden administration immediately removed this government report from the White House website.

President Trump Signed Historic Conservation Legislation

- R. 1957, the “Great American Outdoors Act,” the largest public lands investment in American history.

Improved Forest Management

- R. 2, the “Agriculture Improvement Act,” includes provisions to expedite forest management to reduce the threat of catastrophic wildfires.

Protected Endangered Species

- More endangered and threatened species have been recovered than any previous administration’s first term.

Modified National Monuments to Expand Public Use

- Designated Camp Nelson, a key emancipation site and a refugee camp for African American soldiers and their families during the Civil War, as a National Monument.

Strengthened Trade Agreements and International Conservation Initiatives

- Established the Interagency Environment Committee to coordinate U.S. efforts to monitor and enforce environmental obligations.

Improved Air Quality

- Americans are breathing the cleanest air in our nation’s recorded history.

Improved Water Quality and Reliability

- Signed S. 3021, “America’s Water Infrastructure Act,” and H.R. 7279, the “Water Infrastructure Improvement Act,” to support water infrastructure development.

Modernized Environmental Reviews and Permitting

- Updated the National Environmental Policy Act Regulations, promoting infrastructure development, prioritizing the streamlining of environmental reviews and permitting processes.

These are only some of the accomplishments listed in the report the Biden administration has removed from the White House website.
